

Computing Progression Document KS1

Programming

	FS1	FS2	Year 1	Year 1	Year 2	Year 2
	<p>Programming</p> <p>- All about instructions</p>	<p>Programming</p> <p>-Beebots (Adult Supported)</p>	<p>Programming</p> <p>Algorithms unplugged</p>	<p>Programming</p> <p>Bee-Bots - Virtual</p>	<p>Programming</p> <p>Algorithms & Debugging</p>	<p>Programming</p> <p>Programming - Scratch Jr</p>
	<p>-To following instructions given by an adult</p> <p>-Giving simple instructions to others</p> <p>-To debug instructions (washing hands)</p>	<p>-To learn the meaning of direction arrows</p> <p>-To follow simple instructions using arrows</p> <p>-To tinker with beebots</p> <p>-To follow simple algorithms and program their beebot</p> <p>-To debug and try again when something goes wrong</p>	<p>1. What is an Algorithm? - To understand what an algorithm is</p> <p>-To recognise what we mean by a computer</p> <p>-To understand why we need to log in to a computer</p> <p>-To log in and out of a computer account</p>	<p>1. Getting to know a virtual device - To explore a new device</p> <p>-To 'Tinker' with the buttons of an online Bee-Bot</p> <p>-To complete a number of challenges by:</p> <p>--thinking about what they might do first ('predict')</p> <p>--trying it out ('explore')</p> <p>--seeing if I was right ('explain')</p>	<p>1. Dinosaur Algorithm - To decompose a game to predict the algorithms that are used</p> <p>-To understand the definitions: decomposition and algorithm</p> <p>-To decompose a game to predict algorithms</p> <p>-To plan algorithms for a more complex game</p>	<p>1. Using ScratchJr</p> <p>To explore a new application</p> <p>-To know that ScratchJr is a coding application</p> <p>-To predict what I think something new will do</p> <p>-To explore something independently</p> <p>-To explain what I found using ScratchJ</p>
			<p>2. Algorithm Pictures - To follow instructions precisely to carry out an action</p> <p>-To explain why an algorithm must be clear and precise</p> <p>-To explain the problems a robot can have following our instruction</p>	<p>2. Making a virtual Bee-Bot video - To create a demonstration video</p> <p>- To create a video to explain how to use a Bee-Bot by:</p> <p>-Taking a video recording</p> <p>-Trying it out ('explore')</p> <p>-Seeing if I was right ('explain')</p>	<p>2. Machine Learning - To understand that computers can use algorithms to make predictions (machine learning)</p> <p>-To explain what an algorithm is</p> <p>-To explain that computers use algorithms to make predictions</p> <p>-To write a clear and precise algorithm</p>	<p>2. Creating an animation - To create an animation</p> <p>-To use the programming blocks I've learned about for a purpose</p> <p>-To recognise a loop in programming</p> <p>-To think about how animals move</p> <p>-To use my programming skills creatively to use code to represent an animal moving</p>
			<p>3. Virtual Assistants - To understand that computers and devices around us use inputs and outputs</p> <p>-To identify some input devices</p> <p>-To identify some output devices</p> <p>-To identify some devices that are both input and output devices</p>	<p>3. Precise instructions - To plan and follow a set of instructions precisely</p> <p>- To take on all of the following roles:</p> <p>--'Bee-Bot' (following instructions given by the controller)</p> <p>--'Controller' (giving instructions to the Bee-Bot)</p> <p>--'Judge' (checking that the instructions given by the 'controller' are correct)</p>	<p>3. Through the Maze - To plan algorithms that will solve problems</p> <p>-To devise and create algorithms to solve problems</p> <p>-To include loops in my algorithms (count controlled)</p> <p>-To visualise directions from a 2D environment</p>	<p>3. Making a musical instrument - To use characters as buttons</p> <p>-To design a musical instrument</p> <p>-To program code to run 'on tap'</p> <p>-To select appropriate blocks for my purpose</p>
			<p>4. Step by Step - To understand and be able to explain what decomposition is</p> <p>-To explain that decomposition is where you break a problem into small manageable chunks</p> <p>-To understand how decomposition allows you to solve a problem more easily</p> <p>-To explain how we use decomposition in our everyday lives</p>	<p>4. Bee-Bot world - To program a device</p> <p>-To personalise my Bee-Bot world</p> <p>-To consider how the Bee-Bot can move from one place to another</p> <p>-To plan a Bee-Bot route</p> <p>-To program a Bee-Bot to follow my planned route</p>	<p>4. Making Maps - To understand what abstraction is</p> <p>-To explain what abstraction is</p> <p>-To give an example of when abstraction might be useful</p>	<p>4. Programming a joke - To follow an algorithm</p> <p>-To use an algorithm to help me with my programming</p> <p>-To sequence the blocks appropriately</p> <p>-To explain what each block in the program does</p>

			5. Debugging Directions - To know how to debug an algorithm -To spot bugs in algorithms -To fix the error (debug it) and explain the problem it caused	5. Bee-Bot adventures - To create a program -To know I should not move the Bee-Bot with my mouse -To know how to use programming to give the Bee-Bot clear instructions -To debug my instructions if they go wrong by identifying and correcting the mistake	5. Unplugged Debugging - To understand what debugging is -To understand the meaning of the word 'debugging' -To listen to my peer's verbal instructions -To perform a task by following step-by-step instructions	5. 'The Three Little Pigs' algorithms - To plan and use code to create an algorithm -To explain what an algorithm is -To choose the code to match my algorithm -To use an algorithm to write a computer program

Computing Progression Document KS2

Programming

	Year 3	Year 4	Year 4	Year 5	Year 5	Year 6
	Programming Programming: Scratch	Programming Further coding with Scratch: Microsoft Office 365	Programming Computational Thinking	Programming Programming Music: Scratch	Programming Lego	Programming Intro to Micro:bit
	<p>1. Tinkering with Scratch</p> <ul style="list-style-type: none"> - To explore a programming application - To know that Scratch is a coding application - To predict what I think different codes will do - To explore an application independently - To explain what I found 	<p>1. Scratch Reminder - To recall the key features of Scratch</p> <ul style="list-style-type: none"> - To know what the main parts of Scratch are called - To recognise how to adjust my sprite in Scratch - To add a new sprite to my stage to write a simple script 	<p>1. What is computational thinking? To understand that computational thinking is made up of four key strands</p> <ul style="list-style-type: none"> - To understand that problems can be made easier if I use computational thinking - To know that computational thinking is made up of four strands: decomposition, pattern recognition, abstraction and algorithm 	<p>1. Tinkering with Scratch music elements - To tinker with Scratch music elements</p> <ul style="list-style-type: none"> - To know that Scratch is a coding application that has music elements - To predict what I think different code blocks will do - To explore Scratch independently - To explain what I found from tinkering 	<p>1. L.O. Code the legs</p> <p>L.O. Code the hub numbers</p> <ul style="list-style-type: none"> - To open the Lego Spike app - Select the Prime Solution - To create a new project - To rename the project - To investigate the Hub and the motor ports - To use the algorithm given and make the robots legs move - To use the code given and make the hub numbers change - To tinker with the algorithms and change the speed - To tinker with the algorithms and change the lights on the hub - To debug the algorithms if needed 	<p>1: Name badge</p> <p>Students create their first programs and transfer them to their micro:bits.</p> <ul style="list-style-type: none"> - To explain that the micro:bit is a tiny computer. - To explain that computers need to be given sets of instructions (an algorithm) in code. - To give the micro:bit instructions in code to make a name badge using the LED display output. - Understand the micro:bit is a tiny computer which needs instructions in code to make it work. - Understand that sets of instructions for computers in a sequence are also called algorithms or programs. - Use the MakeCode editor to create instructions in code that the micro:bit can understand and then transfer them to the micro:bit. - Know the micro:bit has an LED display output which it can use to show words (as well as numbers and pictures).
	<p>2. Using Loops - To use repetition (a loop) in a program</p> <ul style="list-style-type: none"> - To understand and explain what a loop is - To recognise when a loop is used - To choose an appropriate loop 	<p>2. Identifying what Code Does - To understand how a Scratch game works by using decomposition to identify key features</p> <ul style="list-style-type: none"> - To recognise that a sprite may contain more than one script - To identify the parts of a Scratch game - To understand what we mean by decomposition 	<p>2. Decomposition - To understand what decomposition is and how to apply it to solve problems</p> <ul style="list-style-type: none"> - To decompose a problem - To use decomposition to figure out what Scratch code does - To decompose a problem to figure out which code blocks might have been used 	<p>2. Scratch Soundtracks - To create a program that plays themed music</p> <ul style="list-style-type: none"> - To use Scratch's basic sound commands - To include a loop in my program - To debug simple errors in my code 	<p>2. L.O. Code the swinging arms</p> <ul style="list-style-type: none"> - To open the existing project - To find which motor hub the arms are connect too - To use the code given to make the arms move - To tinker a code creating an algorithm to make the arms move - To create a dance that involves both the arms and legs 	<p>2. Beating heart</p> <p>Create a simple animation to learn about sequence and simple loops.</p> <ul style="list-style-type: none"> - To create a micro:bit animation using a sequence of images in a loop. - To explain that the order or sequence of instructions is important. - To explain that loops can make code more compact and easier to read. - Understand that sequence and timing is important when making an animation. - Understand that animations create an illusion of movement by showing a sequence of still images. - Code the micro:bit to show simple animations on its LED display output. - Use loops to make animations run longer using fewer instructions.
	<p>3. Making an Animation To program an animation</p> <ul style="list-style-type: none"> - To decompose a project - To plan what I want to happen - To select the blocks to make that happen 	<p>3. Introduction to Variables - To understand what a variable is and how to make one</p> <ul style="list-style-type: none"> - To use the 'ask' block in Scratch - To what a variable means - To make a variable 	<p>3. Abstract & pattern recognition - To understand what pattern recognition and abstraction mean</p> <ul style="list-style-type: none"> - To know how to recognise patterns - To understand how to abstract key information - To understand how to abstract key information 	<p>3. Planning a Soundtrack - To plan a soundtrack program</p> <ul style="list-style-type: none"> - To decompose a story - To plan my program by tinkering - To explain how my program will add to the story 	<p>3. L.O. Code - beats your robot</p> <ul style="list-style-type: none"> - To open the existing project - To follow the instructions, to add the Music tab on the Spike App - To use the code given to create music - To tinker a code creating an algorithm to make music move 	<p>3. Emotion badge</p> <p>Start learning about inputs and outputs using buttons and icons on the display.</p> <ul style="list-style-type: none"> - To make the micro:bit show different pictures on the LED display output depending on which button input is pressed - To explain that inputs are data sent to a computer. - To explain that outputs are data sent from a computer. - Code the micro:bit to make different outputs happen depending on different inputs. (This is a very simple kind of selection. We look at selection in more detail in lesson 5, Nightlight.)

		-To store an answer to a question as a variable				-Understand that inputs and outputs involve the flow of data in and out of computers. -Apply this knowledge using the micro:bit's button inputs and display output.
4. Storytelling - To program a story -To choose appropriate blocks -To continue someone else's program -To debug my own program	4. Making a Variable - To understand how to make a variable in Scratch -To create a variable and use it to store information -To 'call' a variable within my program -To identify that variables can be words or numbers	4. Algorithm Design -To understand how to create an algorithm and what it can be used for -To create an algorithm for drawing a square -To use my algorithm to write a script using Scratch -To use pattern recognition to modify my script to draw different shapes	4. Programming a Soundtrack - To program a soundtrack -To work from a plan -To use a range of programming commands -To explain how my program enhances the scene	4. L.O. Robotics within present day society -To understand what is meant by robotics -To understand what is meant by present day society -To know that technology is always forever changing and improving -To know this includes, houses, factories, shops, mechanics, farming, films etc -To research and list robotics used today in everyday life	4. Step counter Introduce variables to track your step count and begin to use the accelerometer input. -To turn my micro:bit into a step counter using the accelerometer and variables -To explain that the accelerometer is a sensor, an input that senses movement. -To explain that variables are containers for storing data which can be accessed and updated. -Understand how sensor inputs from the accelerometer can be used to detect movement, such as when a step is taken. -Understand that variables are used to keep track of the current step count. -Understand that the order of instructions is important: display the variable's value after updating it, not before. -Apply this learning to build a practical, real-world	
5. Programming a Game - To program a game -To explain the purpose of an algorithm -To decompose a problem -To use an algorithm to code a program	5. Times tables Project - To use knowledge of how variables work to create a quiz -To create a range of questions and use an 'if/else' block to check whether the answer is correct -To use a variable called 'score' to calculate the total number of correct answers for those completing my quiz -To make sure my quiz is engaging and exciting for the people playing it	5. Applying Computational Thinking - To combine computational thinking skills to solve a problem -To apply decomposition, pattern recognition, abstraction and algorithm design to problems -To work with a partner and discuss how to solve a problem	5. Battle of the Bands - To program music for a specific purpose -To combine known commands -To code music with a purpose -To use repetition in a program -To use various forms of output [sound]	5. L.O. Understanding the advantages and disadvantages of robotics in society -To understand the advantages of robotic technology -To understand the disadvantages of robotic technology	5. Lesson 5: Nightlight Make an automatic nightlight and discover how logic, conditionals and inputs and outputs combine to make a simple control system. -To code a micro:bit to make a light that switches on when it gets dark using sensors and logic. -To explain that sensors are inputs that sense things in the real world, such as movement and light. -To explain that logic is how computers make decisions in code based on whether things are true or false. -Understand how inputs, outputs, and computer code work together to make control systems. -Understand how logic (conditional 'if... then... else' instructions) is used to make different outputs happen depending on changes in data from a sensor. -Use 'forever' infinite loops to keep control systems responding to changes in the environment. -Practise testing and improving a project to make the nightlight work better in specific local lighting conditions.
